CEQA Initial Study - Environmental Checklist Form (Based on the State CEQA Guidelines, Appendix G Rev. 10/04)

1. Project Number(s)/Environmental Log Number/Title:

TPM21031RPL¹/ ER06-09-020/Kruse Minor Subdivision (2 Lots)

- Lead agency name and address:
 County of San Diego, Department of Planning and Land Use
 5201 Ruffin Road, Suite B
 San Diego, CA 92123-1666
- 3. a. Contact Kim Sheredy, Project Manager
 - b. Phone number: (858) 495-5873
 - c. E-mail: Kim.Sheredy@sdcounty.ca.gov.
- 4. Project location:

18729 Highland Valley Road in the Ramona Community Planning Area (APN 283-011-11)

Thomas Brothers Coordinates: Page 1171, Grid J/2

5. Project Applicant name and address:

Robert Kruse 18729 Highland Valley Road Ramona, CA 92065 6. General Plan Designation

Community Plan: Ramona

Land Use Designation: (17) Estate Residential Density: 1 du/1, 2, or 4 acre(s)

7. Zoning

Use Regulation: A70 Limited Agriculture

Minimum Lot Size: 2 acre(s) Special Area Regulation: None

8. Description of project:

The project proposes a Tentative Parcel Map to split Assessor Parcel Number 283-011-11 into two discrete parcels (there is an existing residence on parcel 1 that would be retained). The project site is located at 18729 Highland Valley Road in the Ramona Community Planning area, within unincorporated San Diego County. The site is subject to the General Plan Regional Category Estate Development Area (EDA), and Land Use Designation (17) Estate Residential. Zoning for the site is A70 Limited Agriculture. Access would be provided by a private driveway connecting to Highland Valley Road, a public road. The project would be served by an on site septic system and water would be provided by the Ramona Municipal Water District.

9. Surrounding land uses and setting:

Lands surrounding the project site are used for low-density residential development. The topography of the project site averages 22% and adjacent land is slightly sloping. The site is located within 1 ¾ miles of Highway 67.

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):

Permit Type/Action	Agency
Minor Grading Permit	County of San Diego
Tentative Parcel Map	County of San Diego
Improvement Plans	County of San Diego
Septic Tank Permit	County of San Diego
General Construction Storm water	RWQCB
Permit	
Water District Approval	Ramona Municipal Water District
Fire District Approval	Ramona Fire Protection District

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED: The environmental factors checked below would be potentially affected by this project and involve at least one impact that is a "Potentially Significant Impact" or a "Potentially Significant Impact Unless Mitigation Incorporated," as indicated by the checklist on the following pages.

TPM	21031RPL ¹ / ER06-09-02	0 - 3 -	JANUARY 10, 2008

	ERMINATION: (To be cone basis of this initial evaluation)	•	gency)	
	On the basis of this Initial Study, the Department of Planning and Land Use finds that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.			
V	On the basis of this Initial Study, the Department of Planning and Land Use finds that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.			
On the basis of this Initial Study, the Department of Planning and Land Use finds that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

INSTRUCTIONS ON EVALUATION OF ENVIRONMENTAL IMPACTS

- 1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, Less Than Significant With Mitigation Incorporated, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
- 4. "Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.
- 5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
 - a) Earlier Analysis Used. Identify and state where they are available for review.
 - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c) Mitigation Measures. For effects that are "Less Than Significant With Mitigation Incorporated," describe the mitigation measures that were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7. The explanation of each issue should identify:
 - a) The significance criteria or threshold, if any, used to evaluate each guestion; and
 - b) The mitigation measure identified, if any, to reduce the impact to less than significance

I. AESTHETICS Would the project:				
a) Have a substantial adverse effect on a scenic vista?				
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	
Discus	sion/Explanation:			
valued highwa County a sceni project site is c	viewsheds, including areas designated by sor County designated visual resource staff on August 11, 2006, the proposed c vista and will not change the compositions is nestled an area of Ramona surrounly visible by adjacent neighbors and is tenic vista.	as offices. Base projection of undec	cial scenic vistas along major ased on a site visit completed by ct is not located near or visible from an existing scenic vista. The by gentle rolling hills. The project ly obscured by terrain and	
,	Substantially damage scenic resources, outcroppings, and historic buildings with			
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	

No Impact: State scenic highways refer to those highways that are officially designated. A scenic highway is officially designated as a State scenic highway when the local jurisdiction adopts a scenic corridor protection program, applies to the California Department of Transportation for scenic highway approval, and receives notification from Caltrans that the highway has been designated as an official Scenic Highway. Based on a site visit completed by County staff on August 11, 2006, the proposed project is not located near or visible within the same composite viewshed as a State scenic highway and will not change the visual composition of an existing scenic resource within a State scenic highway. Generally, the area defined within a State scenic highway is the land adjacent to and visible from the vehicular right-of-way. The dimension of a scenic highway is usually identified using a motorist's line of vision, but a reasonable boundary is selected when the view extends to the distant horizon. The project site is nestled an area of Ramona surrounded by gentle rolling hills. The project site is only visible by adjacent neighbors and is largely obscured by terrain and vegetation. The nearest State Highway (State Route 67) is not visible from the site nor is the site visible from State Route 67. Therefore, the proposed project will not have any substantial adverse effect on a scenic resource within a State scenic highway.

c)	Substantially degrade the existing visual surroundings?	chara	acter or quality of the site and its

In additional trequire excessive grading.	aracte ire. V ity and nd val sual c rimari ccesso to div loped unde unde comp ne foll ne pro	r is based on the organization of isual character is commonly dontinuity. Visual quality is the ries based on exposure, sensitivity haracter and quality of the project ly large (two to five acre lots) bry buildings and minor agriculture vide a 5-acre parcel into two with single family homes. Much of restory of vegetation and pruning in shows a pad in an area atible with the existing visual owing reasons: The project will perty as designated by both the
the en viewsh compr locate cumul- reside ordina gradin	roject will not result in cumulative impacts tire existing viewshed and a list of past, paned were evaluated. Refer to XVII. Mand behensive list of the projects considered. It within the viewshed surrounding the properties impact for the following reasons: The ntial use of the property as designated by the ince. In addition, the existing topography g. Therefore, the project will not result in on visual character or quality on-site or in the create a new source of substantial light	oresentatory Those oject a e project both of the any a the s	t and future projects within that Findings of Significance for a projects listed in Section XVII are and will not contribute to a ect will comply with the anticipated the general plan and the zoning a site will not require excessive adverse project or cumulative level urrounding area.
	day or nighttime views in the area?		
	Potentially Significant Impact	$\overline{\mathbf{A}}$	Less than Significant Impact
	Less Than Significant With Mitigation Incorporated		No Impact

Less Than Significant Impact: The project proposes a minor residential subdivision, which may include outdoor lighting. Any future outdoor lighting pursuant to this project shall be required to meet the requirements of the County of San Diego Zoning Ordinance (Section 6322-6326) and the Light Pollution Code (Section 59.101-59.115).

The project will not contribute to significant cumulative impacts on day or nighttime views because the project will conform to the Light Pollution Code. The Code was developed by the San Diego County Department of Planning and Land Use and Department of Public Works in cooperation with lighting engineers, astronomers, land use planners from San Diego Gas and Electric, Palomar and Mount Laguna observatories, and local community planning and sponsor groups to effectively address and minimize the impact of new sources light pollution on nighttime views. The standards in the Code are the result of this collaborative effort and establish an acceptable level for new lighting. Compliance with the Code is required prior to issuance of any building permit for any project. Mandatory compliance for all new building permits ensures that this project in combination with all past, present and future projects will not contribute to a cumulatively considerable impact. Therefore, compliance with the Code ensures that the project will not create a significant new source of substantial light or glare, which would adversely affect daytime or nighttime views in the area, on a project or cumulative level.

<u>II. AGRICULTURE RESOURCES</u> -- In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project:

, 	Convert Prime Farmland, Unique Farmla Importance Farmland), as shown on the Farmland Mapping and Monitoring Progoto non-agricultural use?	maps	s prepared pursuant to the
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

No Impact: The project site does not contain any lands designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency. In addition, the project does not contain Farmland of Local Importance. Therefore, no Prime Farmland, Unique Farmland, Farmland of Statewide or Farmland of Local Importance will be converted to a non-agricultural use.

b)	Conflict with existing zoning for agricultural use, or a Williamson Act contract?

c)		Involve other changes in the existing envertience, could result in conversion of Farr		·
[Potentially Significant Impact		Less than Significant Impact
[Less Than Significant With Mitigation Incorporated	V	No Impact
Disc	cus	sion/Explanation:		
No Impact: The project site and surrounding area within radius of one mile do not contain any lands designated as Prime Farmland, Unique Farmland, Farmland of Statewide Importance or Farmland of Local Importance as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency. Therefore, no Prime Farmland, Unique Farmland, Farmland of Statewide, or Farmland of Local Importance will be converted to a non-agricultural use.				
III. AIR QUALITY Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a)		Conflict with or obstruct implementation of Strategy (RAQS) or applicable portions of		
[Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

 ${\bf Discussion/Explanation:}$

Less Than Significant Impact: The project proposes development that was anticipated in SANDAG growth projections used in development of the RAQS and SIP. Operation

of the project will not result in emissions of significant quantities of criteria pollutants listed in the California Ambient Air Quality Standards or toxic air contaminants as identified by the California Air Resources Board. As such, the proposed project is not expected to conflict with either the RAQS or the SIP. In addition, the project is consistent the SANDAG growth projections used in the RAQS and SIP, therefore, the project will not contribute to a cumulatively considerable impact.

,	Violate any air quality standard or contri orojected air quality violation?	bute s	substantially to an existing or
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: The project proposes a Tentative Parcel Map to split a 5-acre parcel into two discrete lots. However, grading operations associated with the construction of the project would be subject to County of San Diego Grading Ordinance, which requires the implementation of dust control measures. Emissions from the construction phase would be minimal and localized, resulting in pollutant emissions below the screening-level criteria established by SDAPCD Rule 20.2 and by the South Coast Air Quality Management District (SCAQMD) CEQA Air Quality Handbook section 6.2 and 6.3. In addition, the vehicle trips generated from the project will result in 12 Average Daily Trips (ADTs). According to the Bay Area Air Quality Management District CEQA Guidelines for Assessing the Air Quality Impacts of Projects and Plans, projects that generate less than 2,000 ADT are below the Screening-Level Criteria established by SDAPCD Rule 20.2 and by the SCAQMD CEQA Air Quality Handbook section 6.2 and 6.3 for criteria pollutants. As such, the project will not violate any air quality standard or contribute substantially to an existing or projected air quality violation.

In general, air quality impacts from land use projects are the result of emissions from motor vehicles, and from short-term construction activities associated with such projects. The San Diego County Air Pollution Control District (SDAPCD) has established screening-level criteria for all new source review (NSR) in APCD Rule 20.2. For CEQA purposes, these screening-level criteria can be used as numeric methods to demonstrate that a project's total emissions (e.g. stationary and fugitive emissions, as well as emissions from mobile sources) would not result in a significant impact to air quality. Since APCD does not have screening-level criteria for emissions of volatile organic compounds (VOCs), the use of the screening level for reactive organic compounds (ROC) from the CEQA Air Quality Handbook for the South Coast Air Basin (SCAB), which has stricter standards for emissions of ROCs/VOCs than San Diego's, is appropriate. However, the eastern portions of the county have atmospheric conditions that are characteristic of the Southeast Desert Air Basin (SEDAB). SEDAB is not classified as an extreme non-attainment area for ozone and therefore has a less restrictive screening-level. Projects located in the eastern portions of the County can use the SEDAB screening-level threshold for VOCs.

د	Result in a cumulatively considerable newhich the project region is non-attainment ambient air quality standard (including requantitative thresholds for ozone precur	nt und eleasii	der an applicable federal or state ng emissions which exceed
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Less Than Significant Impact: Air quality emissions associated with the project include emissions of PM₁₀, NO_x and VOCs from construction/grading activities, and VOCs as the result of increase of traffic from operations at the facility. However, grading operations associated with the construction of the project would be subject to County of San Diego Grading Ordinance, which requires the implementation of dust control measures. Emissions from the construction phase would be minimal and localized, resulting in PM₁₀ and VOC emissions below the screening-level criteria established by SDAPCD Rule 20.2 and by the South Coast Air Quality Management District (SCAQMD) CEQA air quality handbook section 6.2 and 6.3. The vehicle trips generated from the project will result in 12 Average Daily Trips (ADTs). According to the Bay Area Air Quality Management District CEQA Guidelines for Assessing the Air Quality Impacts of Projects and Plans, projects that generate less than 2,000 ADT are below the Screening-Level Criteria established by SDAPCD Rule 20.2 and by the SCAQMD CEQA air quality handbook section 6.2 and 6.3 for VOCs and PM₁₀.

San Diego County is presently in non-attainment for the 1-hour concentrations under the California Ambient Air Quality Standard (CAAQS) for Ozone (O₃). San Diego County is also presently in non-attainment for the annual geometric mean and for the 24-hour concentrations of Particulate Matter less than or equal to 10 microns (PM₁₀) under the CAAQS. O₃ is formed when volatile organic compounds (VOCs) and nitrogen oxides (NO_x) react in the presence of sunlight. VOC sources include any source that burns fuels (e.g., gasoline, natural gas, wood, oil); solvents; petroleum processing and storage; and pesticides. Sources of PM₁₀ in both urban and rural areas include: motor vehicles, wood burning stoves and fireplaces, dust from construction, landfills, agriculture, wildfires, brush/waste burning, and industrial sources of windblown dust from open lands.

In addition, a list of past, present and future projects within the surrounding area were evaluated and none of these projects emit significant amounts of criteria pollutants. Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered. The proposed project as well as the past, present and future projects within the surrounding area, have emissions below the screening-level criteria established by SDAPCD Rule 20.2 and by the SCAQMD CEQA air quality handbook section 6.2 and 6.3, therefore, the construction and operational emissions associated with the proposed project are not expected to create a cumulatively considerable impact nor a considerable net increase of PM10, or any O₃ precursors.

d)	I	Expose sensitive receptors to substantia	al pollu	utant concentrations?
		Potentially Significant Impact		Less than Significant Impact
		Less Than Significant With Mitigation Incorporated	\checkmark	No Impact

<u>IV.</u> a)	 	DLOGICAL RESOURCES Would the Have a substantial adverse effect, either on any species identified as a candidate local or regional plans, policies, or regularish and Game or U.S. Fish and Wildlife	r direc , sens ations	tly or through habitat modifications, itive, or special status species in , or by the California Department of ice?
	\square	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Less Than Significant With Mitigation Incorporated: Biological resources on the project site were evaluated in a Biological Resources Map prepared by Robin Church and dated July 20, 2006. The site is 4.67 acres with an existing residence to remain.

The site consists primarily of 1.44 acres of interior live oak chaparral, and 3.24 acres of developed land. No sensitive species were observed on site. The entire site will be impacted through construction of roads, driveways, houses and fire-clearing. To mitigate for loss of 1.44 acres of interior live oak chaparral, the off site purchase of 2.88 acres of either interior live oak chaparral or mafic mixed chaparral is required. Therefore, staff has determined that although the site supports biological habitat and species, implementation of the mitigation measures described above will ensure that project impacts will not result in substantial adverse effects. The project will not result in or have a cumulatively considerable impact to species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service. All potentially significant impacts will be reduced to a level below significance.

have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?				
□	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

c)	Have a substantial adverse effect on fed Section 404 of the Clean Water Act (inclean pool, coastal, etc.) through direct remove other means?	luding	, but not limited to, marsh, vernal	
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	

Discussion/Explanation:

No Impact: Based on a site visit conducted by County staff on August 11, 2006, and as supported by the Biological Resources Map prepared by Robin Church dated July 20, 2006, it has been determined that the proposed project site does not contain any

wetlands as defined by Section 404 of the Clean Water Act, including, but not limited to, marsh, vernal pool, stream, lake, river or water of the U.S., that could potentially be impacted through direct removal, filling, hydrological interruption, diversion or obstruction by the proposed development. Therefore, no impacts will occur to wetlands defined by Section 404 of the Clean Water Act in which the Army Corps of Engineers maintains jurisdiction over.

d)	Interfere substantially with the movemer or wildlife species or with established na corridors, or impede the use of native w	ative re	esident or migratory wildlife
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discus	ssion/Explanation:

∋)	Conflict with the provisions of any adopt Communities Conservation Plan, other a conservation plan or any other local poli resources?	approv	ved local, regional or state habitat
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant With Mitigation Incorporated: Refer to the attached Ordinance Compliance Checklist for further information on consistency with any adopted Habitat Conservation Plan, Natural Communities Conservation Plan, other approved local, regional or state habitat conservation plan, including, Habitat Management Plans (HMP) Special Area Management Plans (SAMP) or any other local policies or ordinances that protect biological resources including the Multiple Species

Conservation Program (MSCP), Biological Mitigation Ordinance, Resource Protection Ordinance (RPO), Habitat Loss Permit (HLP).

V. CULTURAL RESOURCES Would the project:				
,	Cause a substantial adverse change in as defined in 15064.5?	the si	gnificance of a historical resource	
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	
Discuss	sion/Explanation:			
No Impact: Based on an analysis of records and a survey of the property by a County of San Diego staff archaeologist, Gail Wright on March 8, 2007, it has been determined that there are no impacts to historical resources because they do not occur within the project site. The results of the survey are provided in an historical resources report titled, "Cultural Resources Survey Report for TPM 21031, Log No. 06-09-020 — Kruse Minor Subdivision in Ramona; APN 283-011-11-00 Negative Findings", prepared by Gail Wright, dated March 9, 2007.				
•	Cause a substantial adverse change in resource pursuant to 15064.5?	the siç	gnificance of an archaeological	
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	

Discussion/Explanation:

Less than Significant Impact: Based on an analysis of records and a survey of the property by County of San Diego staff archaeologist, Gail Wright on March 8, 2007, it has been determined that the project site does not contain any archaeological resources. The results of the survey are provided in an archaeological survey report titled, "Cultural Resources Survey Report for TPM 21031, Log No. 06-09-020 – Kruse Minor Subdivision in Ramona; APN 283-011-11-00 Negative Findings", prepared by Gail Wright, dated March 9, 2007.

Staff conducted a records search of the surrounding area using the California Historic Resources Inventory System (CHRIS). At least seven studies (for County and other jurisdiction projects) have been conducted within a one mile radius and approximately 18 sites were identified within one mile from the subject property. Because of the potential for buried prehistoric and historic artifacts, an archaeological monitor will be required during any grading for the project.

Native American Consultation: No Sacred Lands were identified by the Native American Heritage Commission (NAHC). Staff contacted the Native American groups

and individuals provided by the NAHC to further investigate whether they have knowledge of Sacred Lands occurring on the subject parcels. No responses were received.

c)	Directly or indirectly destroy a unique pageologic feature?	aleonto	ological resource or site or unique

	Less Than Significant With Mitigation Incorporated	\checkmark	No Impact		
Discuss	sion/Explanation:				
No Impact: The project is not located in a fault rupture hazard zone identified by the Alquist-Priolo Earthquake Fault Zoning Act, Special Publication 42, Revised 1997, Fault-Rupture Hazards Zones in California, or located within any other area with substantial evidence of a known fault. Therefore, there will be no impact from the exposure of people or structures to adverse effects from a known hazard zone as a result of this project.					
ii	i. Strong seismic ground shaking?				
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact		

Discussion/Explanation:

No Impact: The Uniform Building Code (UBC) and the California Building Code (CBC) classifies all San Diego County with the highest seismic zone criteria, Zone 4. However, the project is not located within 5 kilometers of the centerline of a known active-fault zone as defined within the Uniform Building Code's Maps of Known Active Fault Near-Source Zones in California. In addition, the project will have to conform to the Seismic Requirements -- Chapter 16 Section 162- Earthquake Design as outlined within the California Building Code. Section 162 requires a soils compaction report with proposed foundation recommendations to be approved by a County Structural Engineer before the issuance of a building or grading permit. Therefore, there will be no impact from the exposure of people or structures to potential adverse effects from strong seismic ground shaking as a result of this project.

Seismic-related ground failure, including liquefaction? iii.

Potentially Significant ImpactLess Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discussion/Explanation:		
No Impact: The geology of the project site is geologic environment is not susceptible to ground addition, the site is not underlain by poor artifice. Therefore, there will be no impact from the explanment area susceptible to ground failure.	und fa ial fill	ilure from seismic activity. In or located within a floodplain.
iv. Landslides?		
Potentially Significant ImpactLess Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discussion/Explanation:		
No Impact: The site is not located within a lar geologist Jim Bennett has determined that the has a low probability to be located within an arthat could become unstable in the event of seis impact from the exposure of people to adverse	geologea of personal series of the series of	gic environment of the project area cotential or pre-existing conditions ctivity. Therefore, there will be no
b) Result in substantial soil erosion or the l	loss of	topsoil?
Potentially Significant ImpactLess Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discussion/Explanation:		
Less Than Significant Impact : According to soils on-site are identified as FvD (Fallbrook-Vi		

Less Than Significant Impact: According to the Soil Survey of San Diego County, the soils on-site are identified as FvD (Fallbrook-Vista sandy loam, 9%-5% slopes) and FaC (Fallbrook rocky, sandy loams 5%-9% slopes), both having a soil erodibility rating of "severe" as indicated by the Soil Survey for the San Diego Area, prepared by the US Department of Agriculture, Soil Conservation and Forest Service dated December 1973. However, the project will not result in substantial soil erosion or the loss of topsoil for the following reasons:

• The project will not result in unprotected erodible soils; will not alter existing drainage patterns; is not located in a floodplain, wetland, or significant drainage feature; and will not develop steep slopes.

- The project has prepared a Stormwater Management Plan dated July 20, 2006, prepared by RBF Consulting. The plan includes the following Best Management Practices to ensure sediment does not erode from the project site: fiber rolls, stockpile management, vehicle and equipment maintenance, gravel bag berms, material delivery and storage, spill prevention and control, water conservation practices, paving and grinding operations, and any minor slopes created incidental to construction and not subject to a major or minor grading permit shall be protected by covering with plastic or tarp prior to a rain event, and shall have vegetative cover reestablished within 180 days of completion of the slope and prior to final building approval.
- The project involves grading. However, the project is required to comply with the San Diego County Code of Regulations, Title 8, Zoning and Land Use Regulations, Division 7, Sections 87.414 (DRAINAGE - EROSION PREVENTION) and 87.417 (PLANTING). Compliance with these regulations minimizes the potential for water and wind erosion.

Due to these factors, it has been found that the project will not result in substantial soil erosion or the loss of topsoil on a project level.

In addition, the project will not contribute to a cumulatively considerable impact because all the of past, present and future projects included on the list of projects that involve grading or land disturbance are required to follow the requirements of the San Diego County Code of Regulations, Title 8, Zoning and Land Use Regulations, Division 7, Sections 87.414 (DRAINAGE - EROSION PREVENTION) and 87.417 (PLANTING); Order 2001-01 (NPDES No. CAS 0108758), adopted by the San Diego Region RWQCB on February 21, 2001; County Watershed Protection, Storm Water Management, and Discharge Control Ordinance (WPO) (Ord. No. 9424); and County Storm water Standards Manual adopted on February 20, 2002, and amended January 10, 2003 (Ordinance No. 9426). Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered.

c)	Will the project produce unstable geologimpacts resulting from landslides, lateral collapse?		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

No Impact: The project is not located on or near geological formations that are unstable or would potentially become unstable as a result of the project. On a site visit conducted by County staff on August 11, 2006, no geological formations or features were noted that would produce unstable geological conditions as a result of the project. For further information refer to VI Geology and Soils, Question a., i-iv listed above.

,	d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?					
	Potentially Significant Impact		Less than Significant Impact		
	Less Than Significant With Mitigation Incorporated		No Impact		
Discuss	sion/Explanation:				

Less Than Significant Impact: The project proposes to discharge domestic waste to on-site wastewater systems (OSWS), also known as septic systems. The project involves a septic system including a leach field and reserve leach field located just to the north and east of the proposed single-family residence. Discharged wastewater must conform to the Regional Water Quality Control Board's (RWQCB) applicable standards, including the Regional Basin Plan and the California Water Code. California Water Code Section 13282 allows RWQCBs to authorize a local public agency to issue permits for OSWS "to ensure that systems are adequately designed, located, sized, spaced, constructed and maintained." The RWQCBs with jurisdiction over San Diego County have authorized the County of San Diego, Department of Environmental Health (DEH) to issue certain OSWS permits throughout the County and within the incorporated cities. DEH has reviewed the OSWS lay-out for the project pursuant to DEH, Land and Water Quality Division's, "On-site Wastewater Systems: Permitting Process and Design Criteria." DEH approved the project's OSWS on January 9, 2008. Therefore, the project has soils capable of adequately supporting the use of septic tanks or alternative wastewater disposal systems as determined by the authorized, local public agency. In addition, the project will comply with the San Diego County Code of Regulatory Ordinances, Title 6, Div. 8, Chap. 3, Septic Tanks and Seepage Pits.

VII. HAZARDS AND HAZARDOUS MATERIALS Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, storage, use, or disposal of hazardous materials or wastes?				
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	
Discuss	sion/Explanation:

g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Potentially Significant Impact	 Less than Significant Impact
Less Than Significant With Mitigation Incorporated	No Impact

The following sections summarize the project's consistency with applicable emergency response plans or emergency evacuation plans.

i. OPERATIONAL AREA EMERGENCY PLAN:

Less Than Significant Impact: The Operational Area Emergency Plan is a framework document that provides direction to local jurisdictions to develop specific operational area of San Diego County. It provides guidance for emergency planning and requires subsequent plans to be established by each jurisdiction that has responsibilities in a disaster situation. The project will not interfere with this plan because it will not prohibit subsequent plans from being established.

ii. SAN DIEGO COUNTY NUCLEAR POWER STATION EMERGENCY RESPONSE PLAN

No Impact: The San Diego County Nuclear Power Station Emergency Response Plan will not be interfered with by the project due to the location of the project, plant and the specific requirements of the plan. The emergency plan for the San Onofre Nuclear Generating Station includes an emergency planning zone within a 10-mile radius. All land area within 10 miles of the plant is not within the jurisdiction of the unincorporated County and as such a project in the unincorporated area is not expected to interfere with any response or evacuation.

iii. OIL SPILL CONTINGENCY ELEMENT

No Impact: The Oil Spill Contingency Element will not be interfered with because the project is not located along the coastal zone or coastline.

iv. EMERGENCY WATER CONTINGENCIES ANNEX AND ENERGY SHORTAGE RESPONSE PLAN

No Impact: The Emergency Water Contingencies Annex and Energy Shortage Response Plan will not be interfered with because the project does not propose altering major water or energy supply infrastructure, such as the California Aqueduct.

v. DAM EVACUATION PLAN

No Impact: The Dam Evacuation Plan will not be interfered with because the project is located outside a dam inundation zone.

h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?				
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	
Discus	ssion/Explanation:			
the postructure project defense Distriction fire project The control of the Fire State of the project Public by Control of the project and the Distriction a single the properse of the project of the pr	Than Significant Impact: The proposed tential to support wildland fires. However ares to a significant risk of loss, injury or of the will comply with the regulations relating sible space specified in the Consolidated atts in San Diego County and Appendix II-relative Map, Tentative Parcel Map, or but the ervice Availability Letter and conditions, or dated June 7, 2006, have been received to anditions from the Ramona Municipal Ware: brush clearance, access gate requirements in the Service Availability Letter indicates the state to be 3 minutes. The Maximum Travers Facilities Element is 10 minutes. Therefore the state of th	r, the death to em Fire Ca, as a fire sailding dated from the ter Districter	project will not expose people or involving wildland fires because the ergency access, water supply, and code for the 17 Fire Protection adopted and amended by the local afety standards will occur during permit process. Also, an updated March 6, 2006, and a supplemental he Ramona Fire Protection District. Strict/ Fire Protection District and driveway design requirements. Exted emergency travel time to the me allowed pursuant to the County ased on the review of the project dated Fire Code and Appendix II-A Water District/ Fire Protection ect will expose people or structures azardous wildland fires. Moreover, derable impact, because all past,	
i)	Propose a use, or place residents adjace foreseeable use that would substantially exposure to vectors, including mosquitoe transmitting significant public health dise	increa es, rat	ase current or future resident's s or flies, which are capable of	
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	

No Impact: The project does not involve or support uses that allow water to stand for a period of 72 hours (3 days) or more (e.g. artificial lakes, agricultural irrigation ponds). Also, the project does not involve or support uses that will produce or collect animal

waste, such as equestrian facilities, agricultural operations (chicken coops, dairies etc.), solid waste facility or other similar uses. Moreover, based on a site visit conducted by County staff on August 11, 2006 there are none of these uses on adjacent properties. Therefore, the project will not substantially increase current or future resident's exposure to vectors, including mosquitoes, rats or flies.

VIII. HYDROLOGY AND WATER QUALITY -- Would the project:

a)	\	/iolate any waste discharge requiremen	its?	
[Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Disc	uss	sion/Explanation:		

Less Than Significant Impact: The project proposes a Tentative Parcel Map for a 2lot minor residential subdivision. The project applicant has provided a copy of a Stormwater Management Plan (SWMP) for Minor Projects which demonstrates that the project will comply with all requirements of the San Diego Regional Water Quality Board and Watershed Protection Ordinance. The project site proposes and will be required to implement the following site design measures and/or source control BMP's and/or treatment control BMP's to reduce potential pollutants to the maximum extent practicable from entering storm water runoff: fiber rolls, stockpile management, vehicle and equipment maintenance, gravel bag berms, material delivery and storage, spill prevention and control, paving and grinding operations, and any minor slopes created incidental to construction and not subject to a major or minor grading permit shall be protected by covering with plastic or tarp prior to a rain event, and shall have vegetative cover reestablished within 180 days of completion of the slope and prior to final building approval. The project involves grading. These measures will enable the project to meet waste discharge requirements as required by the Land-Use Planning for New Development and Redevelopment Component of the San Diego Municipal Permit (SDRWQCB Order No. 2001-01), as implemented by the San Diego County Jurisdictional Urban Runoff Management Program (JURMP) and Standard Urban Storm Water Mitigation Plan (SUSMP).

Finally, the project's conformance to the waste discharge requirements listed above ensures the project will not create cumulatively considerable water quality impacts related to waste discharge because, through the permit, the project will conform to Countywide watershed standards in the JURMP and SUSMP, derived from State regulation to address human health and water quality concerns. Therefore, the project will not contribute to a cumulatively considerable impact to water quality from waste discharges.

b) Is the project tributary to an already impaired water body, as listed on the Clean Water Act Section 303(d) list? If so, could the project result in an increase in any pollutant for which the water body is already impaired?

TPM21031RPL'/ ER06-09-020	- 25 -	- JANUARY 10, 2008
Potentially Significant ImpactLess Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Less Than Significant Impact: The project lies in the Ramona (905.41) hydrologic subarea, within the San Dieguito hydrologic unit. According to the Clean Water Act Section 303(d) list, July 2003, a portion of this watershed at the Pacific Ocean and San Dieguito River is impaired for coliform bacteria. Constituents of concern in the San Dieguito watershed include coliform bacteria, nutrients, sediment, lowered dissolve oxygen, and trace metals.

The project proposes the following activities that are associated with these pollutants: soil disturbing activities that will result in exposed soil areas including minor trenching and grading, asphalt paving including patching, stockpiling (soil, compost, asphalt concrete, solid waste) for over 24 hours, and there might be trash generated from the project. However, the following site design measures and/or source control BMPs and/or treatment control BMPs will be employed such that potential pollutants will be reduced in any runoff to the maximum extent practicable so as not to increase the level of these pollutants in receiving waters: fiber rolls, stockpile management, vehicle and equipment maintenance, gravel bag berms, material delivery and storage, spill prevention and control, paving and grinding operations, and any minor slopes created incidental to construction and not subject to a major or minor grading permit shall be protected by covering with plastic or tarp prior to a rain event, and shall have vegetative cover reestablished within 180 days of completion of the slope and prior to final building approval.

The proposed BMPs are consistent with regional surface water and storm water planning and permitting process that has been established to improve the overall water quality in County watersheds. As a result the project will not contribute to a cumulative impact to an already impaired water body, as listed on the Clean Water Act Section 303(d). Regional surface water and storm water permitting regulation for County of San Diego, Incorporated Cities of San Diego County, and San Diego Unified Port District includes the following: Order 2001-01 (NPDES No. CAS 0108758), adopted by the San Diego Region RWQCB on February 21, 2001; County Watershed Protection, Storm Water Management, and Discharge Control Ordinance (WPO) (Ord. No. 9424); County Storm water Standards Manual adopted on February 20, 2002, and amended January 10, 2003 (Ordinance No. 9426). The stated purposes of these ordinances are to protect the health, safety and general welfare of the County of San Diego residents; to protect water resources and to improve water quality; to cause the use of management practices by the County and its citizens that will reduce the adverse effects of polluted runoff discharges on waters of the state; to secure benefits from the use of storm water as a resource; and to ensure the County is compliant with applicable state and federal laws. Ordinance No. 9424 (WPO) has discharge prohibitions, and requirements that vary depending on type of land use activity and location in the County. Ordinance No. 9426 is Appendix A of Ordinance No. 9424 (WPO) and sets out in more detail, by project category, what Dischargers must do to comply with the Ordinance and to receive

permits for projects and activities that are subject to the Ordinance. Collectively, these regulations establish standards for projects to follow which intend to improve water quality from headwaters to the deltas of each watershed in the County. Each project subject to WPO is required to prepare a Storm Water Management Plan that details a project's pollutant discharge contribution to a given watershed and propose BMPs or design measures to mitigate any impacts that may occur in the watershed.

,	surface or groundwater receiving water beneficial uses?	• • • • • • • • • • • • • • • • • • • •
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated	Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: The Regional Water Quality Control Board has designated water quality objectives for waters of the San Diego Region as outlined in Chapter 3 of the Water Quality Control Plan (Plan). The water quality objectives are necessary to protect the existing and potential beneficial uses of each hydrologic unit as described in Chapter 2 of the Plan.

The project lies in the Ramona (905.41) hydrologic subarea, within the San Dieguito hydrologic unit that has the following existing and potential beneficial uses for inland surface waters, coastal waters, reservoirs and lakes, and ground water: municipal and domestic supply; agricultural supply; industrial process supply, industrial service supply; contact water recreation; non-contact water recreation; warm freshwater habitat; cold freshwater habitat; wildlife habitat; estuarine habitat; marine habitat; preservation of biological habitats of special significance; migration of aquatic organisms; and, rare, threatened, or endangered species habitat.

The project proposes the following potential sources of polluted runoff: soil disturbing activities that will result in exposed soil areas including minor trenching and grading, asphalt paving including patching, stockpiling (soil, compost, asphalt concrete, solid waste) for over 24 hours, and there might be trash generated from the project. However, the following site design measures and/or source control BMPs and/or treatment control BMPs will be employed to reduce potential pollutants in runoff to the maximum extent practicable, such that the proposed project will not cause or contribute to an exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses: fiber rolls, stockpile management, vehicle and equipment maintenance, gravel bag berms, material delivery and storage, spill prevention and control, paving and grinding operations, and any minor slopes created incidental to construction and not subject to a major or minor grading permit shall be protected by covering with plastic or tarp prior to a rain event, and shall have vegetative cover reestablished within 180 days of completion of the slope and prior to final building approval.

In addition, the proposed BMPs are consistent with regional surface water, storm water and groundwater planning and permitting process that has been established to improve the overall water quality in County watersheds. As a result, the project will not contribute to a cumulatively considerable exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses. Refer to Section VIII., Hydrology and Water Quality, Question b, for more information on regional surface water and storm water planning and permitting process.

d)	6	Substantially deplete groundwater suppling groundwater recharge such that there we allowering of the local groundwater table existing nearby wells would drop to a levuses or planned uses for which permits	ould be level e level vel wh	ne a net deficit in aquifer volume or (e.g., the production rate of pre- ich would not support existing land

	the	stantially alter the existing drainage patral alteration of the course of a stream or ri stantial erosion or siltation on- or off-site	ver, in	
		Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: The project proposes to subdivide 4.67 gross acres into two residential parcels. As outlined in the Storm water Management Plan (SWMP) dated July 7, 2006, and prepared by RBF Consulting, the project will implement the following site design measures, source control, and/or treatment control BMPs to reduce potential pollutants, including sediment from erosion or siltation, to the maximum extent practicable from entering storm water runoff: fiber rolls, stockpile management,

vehicle and equipment maintenance, gravel bag berms, material delivery and storage, spill prevention and control, paving and grinding operations, and any minor slopes created incidental to construction and not subject to a major or minor grading permit shall be protected by covering with plastic or tarp prior to a rain event, and shall have vegetative cover reestablished within 180 days of completion of the slope and prior to final building approval. These measures will control erosion and sedimentation and satisfy waste discharge requirements as required by the Land-Use Planning for New Development and Redevelopment Component of the San Diego Municipal Permit (SDRWQCB Order No. 2001-01), as implemented by the San Diego County Jurisdictional Urban Runoff Management Program (JURMP) and Standard Urban Storm Water Mitigation Plan (SUSMP). The SWMP specifies and describes the implementation process of all BMPs that will address equipment operation and materials management, prevent the erosion process from occurring, and prevent sedimentation in any onsite and downstream drainage swales. The Department of Public Works will ensure that the Plan is implemented as proposed. Due to these factors, it has been found that the project will not result in significantly increased erosion or sedimentation potential and will not alter any drainage patterns of the site or area onor off-site. In addition, because erosion and sedimentation will be controlled within the boundaries of the project, the project will not contribute to a cumulatively considerable impact. For further information on soil erosion refer to VI., Geology and Soils, Question b.

f)	the alteration of the course of	f a stream or river, o	of the site or area, including through or substantially increase the rate or d result in flooding on- or off-site?
	Potentially Significant In Less Than Significant W Incorporated	•	Less than Significant Impact No Impact
	Discussion/Explanation:		

Less Than Significant Impact: DPW staff has reviewed the Preliminary Grading Plan (dated September 25, 2007), Preliminary Drainage Study (dated April 4, 2006) prepared by ERB Engineering, and Stormwater Management Plan (dated July 7, 2006) prepared by RBF Consulting. The proposed project will not significantly alter established drainage patterns & not significantly increase the amount of runoff for the following reasons:

- a. Drainage will be conveyed to either natural drainage channels or approved drainage facilities.
- b. The project will not increase water surface elevation in a watercourse with a watershed equal to or greater one square mile by 1' or more in height.
- c. The project will not increase surface runoff exiting the project site equal to or greater than one cubic foot/second.

Therefore, the project will not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding onor off-site. Moreover, the project will not contribute to a cumulatively considerable alteration or a drainage pattern or increase in the rate or amount of runoff, because the project will substantially increase water surface elevation or runoff exiting the site, as detailed above.

g)	planned storm water drainage systems?			
		Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
	Disc	ussion/Explanation:		
(da by by	Less Than Significant Impact : DPW staff has reviewed the Preliminary Grading Plan (dated September 25, 2007), Preliminary Drainage Study (dated April 4, 2006) prepared by ERB Engineering, and Storm Water Management Plan (dated July 7, 2006) prepared by RBF Consulting. The project does not propose to create or contribute runoff water that would exceed the capacity of existing or planned storm water drainage systems.			
h)	h) Provide substantial additional sources of polluted runoff?			
		Potentially Significant Impact Potentially Significant Unless Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: The project proposes the following potential sources of polluted runoff: soil disturbing activities that will result in exposed soil areas including minor trenching and grading, asphalt paving including patching, stockpiling (soil, compost, asphalt concrete, solid waste) for over 24 hours, and there might be trash generated from the project. However, the following site design measures and/or source control BMPs and/or treatment control BMPs will be employed such that potential pollutants will be reduced in runoff to the maximum extent practicable: fiber rolls, stockpile management, vehicle and equipment maintenance, gravel bag berms, material delivery and storage, spill prevention and control, paving and grinding operations, and any minor slopes created incidental to construction and not subject to a major or minor grading permit shall be protected by covering with plastic or tarp prior to a rain event, and shall have vegetative cover reestablished within 180 days of completion of the slope and prior to final building approval. The project involves grading. Refer to VIII Hydrology and Water Quality Questions a, b, c, for further information.

i) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation

TPM21	031RPL ¹ / ER06-09-020	- 30 -	JANUARY 10, 2008	
maj	o, including County Floodplain Maps?			
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	
Discus	sion/Explanation:

No housing is proposed to be placed in any FEMA mapped floodplains, County-mapped floodplains or drainages with a watershed greater than 25 acres; therefore, no impact will occur.				
• /	ce within a 100-year flood hazard area s d flows?	tructu	res which would impede or redirect	
Dise	Potentially Significant Impact Less Than Significant With Mitigation Incorporated cussion/Explanation:		Less than Significant Impact No Impact	
Less Than Significant Impact DPW staff has reviewed the Preliminary Grading Plan (dated September 25, 2007), Preliminary Drainage Study (dated April 4, 2006) prepared by ERB Engineering, and Storm Water Management Plan (dated July 7, 2006) prepared by RBF Consulting. No structures are proposed to be placed in any100-year flood hazard areas; therefore, no impact will occur.				
, .	k) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?			
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	
Discussion/Explanation:				
No Impact: The project site lies outside any identified special flood hazard areas that				

include a mapped dam inundation area for a major dam/reservoir within San Diego County. In addition, the project is not located immediately downstream of a minor dam that could potentially flood the property. Therefore, the project will not expose people to a significant risk of loss, injury or death involving flooding as a result of the failure of a levee or dam.

I) Inundation by seiche, tsunami, or mudflow?

ii. 7	TSUNAMI			
-	act: The project site is located more th f a tsunami, would not be inundated.	an a r	nile from the coast; therefore, in the	
iii. N	MUDFLOW			
No Impact: Mudflow is type of landslide. The site is not located within a landslide susceptibility zone. Also, staff geologist, Jim Bennett, has determined that the geologic environment of the project area has a low probability to be located within an area of potential or pre-existing conditions that could become unstable in the event of seismic activity. In addition, though the project does propose land disturbance that will expose unprotected soils, the project is not located downstream from unprotected, exposed soils within a landslide susceptibility zone. Therefore, it is not anticipated that the project will expose people or property to inundation due to a mudflow.				
IX. LAND USE AND PLANNING Would the project: a) Physically divide an established community?				
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	
	. <u> </u>			

No Impact: The project does not propose the introducing new infrastructure such major roadways or water supply systems, or utilities to the area. Therefore, the proposed project will not significantly disrupt or divide the established community.

b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

TPM21031RPL ¹ / ER06-09-020	- 32	- JANUARY 10, 2008	
Potentially Significant ImpactLess Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	
Discussion/Explanation:			
Less Than Significant Impact: The proposed project is subject to the Regional Land Use Element Policy Estate Development Area (EDA) and General Plan Land Use Designation (17) Estate Residential. The General Plan requires minimum gross parcel sizes of not more than 1 dwelling unit per 2 or 4 acres based on average slope. The average slope of the two lots is less than 25%; therefore the minimum lot size requirement is 2 acres. Lot 1 is 2.34 gross acres and Lot 2 is 2.33 gross acres. The proposed project has gross parcel sizes and density that are consistent with the General Plan. The project is subject to the policies of the Ramona Community Plan. The proposed project is consistent with the policies of the Ramona Community Plan. The current zone is A70 Limited Agriculture, which requires a net minimum lot size of 2 acres. The proposed project is consistent with the Zoning Ordinance requirements for minimum lot size.			
 X. MINERAL RESOURCES Would the project a) Result in the loss of availability of a know value to the region and the residents of the residents of the residents of the residents. 	wn mi		
Potentially Significant ImpactLess Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	
Discussion/Explanation:			
Less Than Significant Impact: Although the project site has been classified by the California Department of Conservation – Division of Mines and Geology (Update of Mineral Land Classification: Aggregate Materials in the Western San Diego Production-Consumption Region, 1997) as an area of undetermined mineral resources MRZ-3, staff geologist Jim Bennett has reviewed the site's geologic environment and has determined that the site is not located within an alluvial river valley or underlain by coastal marine/non-marine granular deposits. Therefore, no potentially significant loss of availability of a known mineral resource of value to the region and the residents of the state will occur as a result of this project. Moreover, if the resources are not considered significant mineral deposits, loss of these resources cannot contribute to a potentially significant cumulative impact.			
b) Result in the loss of availability of a loca site delineated on a local general plan, s	•	•	
 Potentially Significant Impact Less Than Significant With Mitigation Incorporated 		Less than Significant Impact No Impact	

No Impact: The project site is zoned A70 Limited Agriculture, which is not considered to be an Extractive Use Zone (S-82) nor does it have an Impact Sensitive Land Use Designation (24) with an Extractive Land Use Overlay (25) (County Land Use Element, 2000). Therefore, no potentially significant loss of availability of a known mineral resource of locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan will occur as a result of this project.

XI. NOISE -- Would the project result in:

,	Exposure of persons to or generation of established in the local general plan or r of other agencies?	
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated	Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: The project is a Tentative Parcel Map which proposes to split a 5-acre parcel into two discrete legal lots and will be occupied by the current owner of the property. Based on a site visit completed by County staff on August 11, 2006, the surrounding area supports primarily residential homes on large (2- to 5- acre lots). The project will not expose people to potentially significant noise levels that exceed the allowable limits of the County of San Diego General Plan, County of San Diego Noise Ordinance, and other applicable standards for the following reasons:

General Plan – Noise Element

The County of San Diego General Plan, Noise Element, Policy 4b addresses noise sensitive areas and requires an acoustical study to be prepared for any use that may expose noise sensitive areas to noise in excess of a Community Noise Equivalent Level (CNEL) of 60 decibels (dBA). Moreover, if the project is excess of CNEL 60 dB(A), modifications must be made to the project to reduce noise levels. Noise sensitive areas include residences, hospitals, schools, libraries or similar facilities where quiet is an important attribute. Project implementation is not expected to expose existing or planned noise sensitive areas to road, airport, heliport, railroad, industrial or other noise in excess of the CNEL 60 dB(A). This is based on staff's review of projected County noise contour maps (CNEL 60 dB(A) contours) and review by County Noise Specialist, Emmet Aquino on December 7, 2006. Therefore, the project will not expose people to potentially significant noise levels that exceed the allowable limits of the County of San Diego General Plan, Noise Element.

Ramona Community Plan

The County of San Diego General Plan, Ramona Community Plan, has a standard of CNEL 55 dB(A) for all projected noise contours near main circulation roadways, airports and other noise sources and requires mitigation if this level is exceeded. Project

implementation is not expected to expose existing or planned noise sensitive areas to road, airport, heliport, railroad, industrial or other noise in excess of the CNEL 55 dB(A). This is based on staff's review of projected County noise contour maps (CNEL 55 dB(A) contours) and review by County Noise Specialist Emmet Aquino on December 7, 2006. Therefore, the project will not expose people to potentially significant noise levels that exceed the allowable limits of the County of San Diego General Plan, Ramona Community Plan.

Noise Ordinance – Section 36-404

Non-transportation noise generated by the project is not expected to exceed the standards of the County of San Diego Noise Ordinance (Section 36-404) at or beyond the project's property line. The site is zoned A-70 that has a one-hour average sound limit of 50 dBA. The adjacent properties are zoned A-70 and have one-hour average sound limit of 50 dBA. Based on review by staff and the County Noise Specialist Emmet Aquino on December 7, 2006, the project's noise levels are not anticipated to impact adjoining properties or exceed County Noise Standards, which is 47.5 decibels because the project does not involve any noise producing equipment that would exceed applicable noise levels at the adjoining property line.

Noise Ordinance - Section 36-410

The project will not generate construction noise that may exceed the standards of the County of San Diego Noise Ordinance (Section 36-410). Construction operations will occur only during permitted hours of operation pursuant to Section 36-410. Also, It is not anticipated that the project will operate construction equipment in excess of an average sound level of 75dB between the hours of 7 AM and 7 PM.

Finally, the project's conformance to the County of San Diego General Plan (Noise Element, Policy 4b and Ramona Community Plan) and County of San Diego Noise Ordinance (Section 36-404 and 36-410) ensures the project will not create cumulatively considerable noise impacts, because the project will not exceed the local noise standards for noise sensitive areas; and the project will not exceed the applicable noise level limits at the property line or construction noise limits, derived from State regulation to address human health and quality of life concerns. Therefore, the project will not contribute to a cumulatively considerable exposure of persons or generation of noise levels in excess of standards established in the local general plan, noise ordinance, and applicable standards of other agencies.

b)	Exposure of persons to or generation of groundborne noise levels?	exces	ssive groundborne vibration or
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: The project proposes residences where low ambient vibration is essential for interior operation and/or sleeping conditions. However, the

facilities are setback 200 feet from any public road or transit Right-of-Way with projected noise contours of 65 dB or more; any property line for parcels zoned industrial or extractive use; or any permitted extractive uses. A setback of 200 feet ensures that the operations do not have any chance of being impacted by groundborne vibration or groundborne noise levels (Harris, Miller Miller and Hanson Inc., *Transit Noise and Vibration Impact Assessment* 1995). In addition, the setback ensures that the project will not be affected by any past, present or future projects that may support sources of groundborne vibration or groundborne noise.

Also, the project does not propose any major, new or expanded infrastructure such as mass transit, highways or major roadways or intensive extractive industry that could generate excessive groundborne vibration or groundborne noise levels and impact vibration sensitive uses in the surrounding area.

Therefore, the project will not expose persons to or generate excessive groundborne vibration or groundborne noise levels on a project or cumulative level.

,	A substantial permanent increase in am above levels existing without the project	noise levels in the project vicinity
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated	Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: The project involves the following permanent noise sources that may increase the ambient noise level: motor vehicles. As indicated in the response listed under Section XI Noise, Question a., the project would not expose existing or planned noise sensitive areas in the vicinity to a substantial permanent increase in noise levels that exceed the allowable limits of the County of San Diego General Plan, County of San Diego Noise Ordinance, and other applicable local, State, and Federal noise control. Also, the project is not expected to expose existing or planned noise sensitive areas to noise 10 dB CNEL over existing ambient noise levels based on review of the project by County staff. Studies completed by the Organization of Industry Standards (ISO 362; ISO 1996 1-3; ISO 3095; and ISO 3740-3747) state an increase of 10 dB is perceived as twice as loud and is perceived as a significant increase in the ambient noise level.

The project will not result in cumulatively noise impacts because a list of past, present and future projects within in the vicinity were evaluated. It was determined that the project in combination with a list of past, present and future project would not expose existing or planned noise sensitive areas to noise 10 dB CNEL over existing ambient noise levels. Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered.

d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?

	Potentially Significant Impact	$\overline{\checkmark}$	Less than Significant Impact		
	Less Than Significant With Mitigation Incorporated		No Impact		
Discuss	sion/Explanation:				
substar includin that inv	Less Than Significant Impact: The project does not involve any uses that may create substantial temporary or periodic increases in ambient noise levels in the project vicinity including but not limited to extractive industry; outdoor commercial or industrial uses that involve crushing, cutting, drilling, grinding, or blasting of raw materials; truck depote transfer stations or delivery areas; or outdoor sound systems.				
of the C State re operation 410. All excess project	Also, general construction noise is not expected to exceed the construction noise limits of the County of San Diego Noise Ordinance (Section 36-410), which are derived from State regulations to address human health and quality of life concerns. Construction operations will occur only during permitted hours of operation pursuant to Section 36-410. Also, it is not anticipated that the project will operate construction equipment in excess of 75 dB for more than an 8 hours during a 24-hour period. Therefore, the project would not result in a substantial temporary or periodic increase in existing ambient noise levels in the project vicinity.				
r t	e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				
	Potentially Significant Impact		Less than Significant Impact		
	Less Than Significant With Mitigation Incorporated	\checkmark	No Impact		
Discuss	sion/Explanation:				
No Impact: The proposed project is not located within a Comprehensive Land Use Plan (CLUP) for airports or within 2 miles of a public airport or public use airport. Therefore, the project will not expose people residing or working in the project area to excessive airport-related noise levels.					
•	For a project within the vicinity of a priva beople residing or working in the project				
	Potentially Significant Impact		Less than Significant Impact		
	Less Than Significant With Mitigation Incorporated	\checkmark	No Impact		

No Impact: The proposed project is not located within a one-mile vicinity of a private
airstrip; therefore, the project will not expose people residing or working in the project
area to excessive airport-related noise levels.

area io	excessive aiiport-related hoise levels.		
a) I	DPULATION AND HOUSING Would to induce substantial population growth in a proposing new homes and businesses) extension of roads or other infrastructure.	an are or indi	ea, either directly (for example, by

•	pposed project will not displace existing dition of 1 dwelling unit will yield a net ga		•
-	Displace substantial numbers of people, eplacement housing elsewhere?	nece	ssitating the construction of
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

No Impact: The property currently has 1 dwelling unit, which is to remain. This residential development would not displace any amount of existing housing. Potentially a total of 1 additional single-family dwellings will exist when the lots are developed. Therefore, the proposed project will not displace people

XIII. PUBLIC SERVICES

- a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance service ratios, response times or other performance objectives for any of the public services:
 - i. Fire protection?
 - ii. Police protection?
 - iii. Schools?
 - iv. Parks?
 - v. Other public facilities?

Potentially Significant Impact		Less than Significant Impact
Less Than Significant With Mitigation Incorporated	$\overline{\checkmark}$	No Impact

Discussion/Explanation:

No Impact: Based on the service availability forms received for the project, the proposed project will not result in the need for significantly altered services or facilities. Service availability forms have been provided which indicate existing services are available to the project from the following agencies/districts: Ramona Municipal Water District, Ramona Unified School District, and Ramona Fire Protection District. The project does not involve the construction of new or physically altered governmental facilities including but not limited to fire protection facilities, sheriff facilities, schools, or parks in order to maintain acceptable service ratios, response times or other performance service ratios or objectives for any public services. Therefore, the project will not have an adverse physical effect on the environment because the project does not require new or significantly altered services or facilities to be constructed.

XIV. RECREATION

$\Delta IV.$	RECREATION		
a)	Would the project increase the use of exor other recreational facilities such that facility would occur or be accelerated?	_	, , , , , , , , , , , , , , , , , , , ,
	Potentially Significant Impact	$\overline{\checkmark}$	Less than Significant Impact
	Less Than Significant With Mitigation Incorporated		No Impact

Less Than Significant Impact: The project involves a residential subdivision that will increase the use of existing neighborhood and regional parks or other recreational facilities. To avoid substantial physical deterioration of local recreation facilities the project will be required to pay fees or dedicate land for local parks to the County pursuant to the Park Land Dedication Ordinance (PLDO). The Park Land Dedication Ordinance (PLDO) is the mechanism that enables the funding or dedication of local parkland in the County. The PLDO establishes several methods by which developers may satisfy their park requirements. Options include the payment of park fees, the dedication of a public park, the provision of private recreational facilities, or a combination of these methods. PLDO funds must be used for the acquisition, planning. and development of local parkland and recreation facilities. Local parks are intended to serve the recreational needs of the communities in which they are located. The proposed project opted to pay the park fees. Therefore, the project meets the requirements set forth by the PLDO for adequate parkland dedication and thereby reducing impacts, including cumulative impacts to local recreational facilities. The project will not result in significant cumulative impacts, because all past, present and future residential projects are required to comply with the requirements of PLDO. Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered.

There is an existing surplus of County Regional Parks. Currently, there are over 21,765 acres of regional parkland owned by the County, which far exceeds the General Plan standard of 15 acres per 1,000 population. In addition, there are over one million acres of publicly owned land in San Diego County dedicated to parks or open space including Federal lands, State Parks, special districts, and regional river parks. Due to the extensive surplus of existing publicly owned lands that can be used for recreation the project will not result in substantial physical deterioration of regional recreational facilities or accelerate the deterioration of regional parkland. Moreover, the project will not result any cumulatively considerable deterioration or accelerated deterioration of regional recreation facilities because even with all past, present and future residential projects a significant surplus of regional recreational facilities will remain.

Does the project include recreational face expansion of recreational facilities, whic on the environment?	•
Potentially Significant Impact Less Than Significant With Mitigation Incorporated	Less than Significant Impact No Impact

Discussion/Explanation:

No Impact: The project does not include recreational facilities or require the construction or expansion of recreational facilities. Therefore, the construction or

expansion of recreational facilities cannot have an adverse physical effect on the environment.

XV. T	RANSPORTATION/TRAFFIC Would t	the pro	piect:
a)	Cause an increase in traffic which is sub load and capacity of the street system (in either the number of vehicle trips, the vo- congestion at intersections)?	ostanti i.e., re	al in relation to the existing traffic sult in a substantial increase in

It project impact on traffic volume, traffic load and capacity of the
b)	Exceed, either individually or cumulative established by the County congestion m by the County of San Diego Transportat roads or highways?	nanage	ement agency and/or as identified
	Potentially Significant Impact		Less than Significant Impact
\checkmark	Less Than Significant With Mitigation Incorporated		No Impact

Discussion/Explanation:

Less Than Significant With Mitigation Incorporated: The proposed project will result in an additional 12 ADT. The project was reviewed by DPW staff and was determined not to exceed a level of service (LOS) standard at the direct project level. Therefore, the project will not have a significant direct project-level impact on the LOS standards established by the County congestion management agency for designated roads or highways. (Cumulative impacts may not be less than significant)

However, the County of San Diego has developed an overall programmatic solution that addresses existing and projected future road deficiencies in the unincorporated portion of San Diego County. This program includes the adoption of a Transportation Impact Fee (TIF) program to fund improvements to roadways necessary to mitigate potential cumulative impacts caused by traffic from future development. This program is based on a summary of projections method contained in an adopted planning document, as referenced in the State CEQA Guidelines Section 15130 (b)(1)(B), which evaluates

regional or area wide conditions contributing to cumulative transportation impacts. Based on SANDAG regional growth and land use forecasts, the SANDAG Regional Transportation Model was utilized to analyze projected build-out (year 2030) development conditions on the existing circulation element roadway network throughout the unincorporated area of the County. Based on the results of the traffic modeling, funding necessary to construct transportation facilities that will mitigate cumulative impacts from new development was identified. Existing roadway deficiencies will be corrected through improvement projects funded by other public funding sources, such as TransNet, gas tax, and grants. Potential cumulative impacts to the region's freeways have been addressed in SANDAG's Regional Transportation Plan (RTP). This plan, which considers freeway buildout over the next 30 years, will use funds from TransNet, state, and federal funding to improve freeways to projected level of service objectives in the RTP.

The proposed project generates an additional 12 ADT. These trips will be distributed on circulation element roadways in the unincorporated county that were analyzed by the TIF program, some of which currently or are projected to operate at inadequate levels of service. These project trips therefore contribute to a potential significant cumulative impact and mitigation is required. The potential growth represented by this project was included in the growth projections upon which the TIF program is based. Therefore, payment of the TIF, which will be required at issuance of building permits, in combination with other components of the program described above, will mitigate potential cumulative traffic impacts to less than significant.

In order to mitigate its incremental contribution to significant cumulative traffic impacts, the proposed project will pay the TIF prior to obtaining building permits.

a)	TILITIES AND SERVICE SYSTEMS \ Exceed wastewater treatment requiremed Quality Control Board?		
	Potentially Significant Impact	\checkmark	Less than Significant Impact
	Less Than Significant With Mitigation Incorporated		No Impact
Discus	sion/Explanation:		
Less Than Significant Impact: The project proposes to discharge domestic waste to on-site wastewater systems (OSWS), also known as septic systems. The project involves two standard on-site wastewater systems: the first is located to the west of the existing residence (and a reserve leach field area would be located to the northeast) on parcel 1 and a future OSWS would be located to the north of the future residence on parcel 2. Discharged wastewater must conform to the Regional Water Quality Control Board's (RWQCB) applicable standards, including the Regional Basin Plan and the California Water Code. California Water Code Section 13282 allows RWQCBs to authorize a local public agency to issue permits for OSWS "to ensure that systems are adequately designed, located, sized, spaced, constructed and maintained." The RWQCBs with jurisdiction over San Diego County have authorized the County of San Diego, Department of Environmental Health (DEH) to issue certain OSWS permits throughout the County and within the incorporated cities. DEH has reviewed the OSWS lay-out for the project pursuant to DEH, Land and Water Quality Division's, "On-site Wastewater Systems: Permitting Process and Design Criteria." DEH approved the project's OSWS on January 9, 2008. Therefore, the project is consistent with the wastewater treatment requirements of the RWQCB as determined by the authorized, local public agency.			
	Require or result in the construction of nefacilities or expansion of existing facilities significant environmental effects?		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less Than Significant Impact: The project involves a new wastewater treatment facility. The new facility includes one standard on-site wastewater system (OSWS),

also know as a septic system. The project involves a proposed 1,000-foot leach line on Parcel 2 and there is an existing 700-foot leachline on Parcel 1. However, as outlined in this Environmental Analysis Form Section I-XVII, the new facility will not result in adverse physical effect on the environment. DEH approved the project's OSWS on January 9, 2008. Therefore, the project is consistent with the wastewater treatment requirements of the RWQCB as determined by the authorized, local public agency.

	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
ъ.	• /=		

Discussion/Explanation:

Less than Significant Impact: Implementation of the project will generate solid waste. All solid waste facilities, including landfills require solid waste facility permits to operate. In San Diego County, the County Department of Environmental Health, Local Enforcement Agency issues solid waste facility permits with concurrence from the California Integrated Waste Management Board (CIWMB) under the authority of the Public Resources Code (Sections 44001-44018) and California Code of Regulations Title 27, Division 2, Subdivision 1, Chapter 4 (Section 21440et seq.). The project will deposit all solid waste at a permitted solid waste facility and therefore, will comply with Federal, State, and local statutes and regulations related to solid waste.

XVII. MANDATORY FINDINGS OF SIGNIFICANCE:

Less Than Significant With Mitigation Incorporated: Per the instructions for evaluating environmental impacts in this Initial Study, the potential for adverse cumulative effects were considered in the response to each question in sections I through XVI of this form. In addition to project specific impacts, this evaluation considered the projects potential for incremental effects that are cumulatively considerable. As a result of this evaluation, there were determined to be potentially significant cumulative effects related to biological resources. However, mitigation has been included that clearly reduces these cumulative effects to a level below significance. This mitigation includes payment of the Transportation Impact Fee (TIF) and the off-size purchase of 2.88 acres of interior live oak chaparral or mafic mixed chaparral habitat credit in a mitigation bank or providing for the conservation and habitat management of a minimum of 2.88 acres of interior live oak chaparral or mafic mixed chaparral habitat located in North County. As a result of this evaluation, there is no substantial evidence that, after mitigation, there are cumulative effects associated with this project. Therefore, this project has been determined not to meet this Mandatory Finding of Significance.

c) Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?

	Potentially Significant Impact	 Less than Significant Impact
$\overline{\checkmark}$	Less Than Significant With Mitigation Incorporated	No Impact

Less Than Significant With Mitigation Incorporated: In the evaluation of environmental impacts in this Initial Study, the potential for adverse direct or indirect impacts to human beings were considered in the response to certain questions in sections I. Aesthetics, III. Air Quality, VI. Geology and Soils, VII. Hazards and Hazardous Materials, VIII Hydrology and Water Quality XI. Noise, XII. Population and Housing, and XV. Transportation and Traffic. As a result of this evaluation, there were determined to be potentially significant effects to human beings related to traffic. However, mitigation has been included that clearly reduces these effects to a level below significance. This mitigation includes payment of the TIF to mitigate for the impacts of the additional 12 ADT . As a result of this evaluation, there is no substantial evidence that, after mitigation, there are adverse effects to human beings associated with this project. Therefore, this project has been determined not to meet this Mandatory Finding of Significance.
